

## Quality Policy

In accordance with its corporate mission, vision and strategy, **MESIT machinery a.s.** establishes this quality policy as a fundamental element of its quality management system in accordance with the requirements of **ISO 9001 and AS9100**.

Our goal is to consistently deliver products and services that meet or exceed customer, legislative and regulatory requirements and ensure a high level of **safety, reliability and product compliance, especially for the aerospace and defence industries.**

The company's management is committed to:

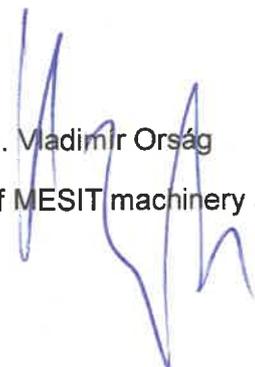

- **Focus on product safety, compliance and reliability**, with an emphasis on non-conformity prevention and risk management throughout the product life cycle.
- **To meet the requirements of customers, relevant authorities and applicable legislation**, including the specific requirements of the aerospace and defence industries.
- **Applying a process approach and risk-based thinking**, including the assessment and management of operational, quality and supplier risks.
- **Promote a culture of quality, safety and ethical behaviour**, including awareness of the importance of product compliance and the right of employees to report problems without fear of reprisal.
- **Ensure employee competence, training and involvement**, as quality is the responsibility of every employee in the company.
- **Systematically improve the effectiveness of the quality management system**, set measurable quality objectives and regularly evaluate their fulfilment.
- **Manage and develop the supply chain** to ensure stable, safe and high-quality inputs into production and prevent the use of counterfeit or unapproved parts.

This quality policy provides a framework for setting and reviewing quality objectives and is **implemented, maintained, communicated, understood and applied at all levels of the organisation.**

The company's management is committed to providing the necessary resources for its implementation and to reviewing it regularly for ongoing suitability.
